Lesson Learned Card

LLC Type

Date of LLC: **3/20/2024**

Logistics:	☐	Management:	☐
Product:	☐	Detection:	☐
Occurence:	☑	Process:	☐

1. What was the problem?

What happened?

lack of DMC

Who detected it?

operator

Where was it detected?

CM4 line

How was it detected?

visually

Why is it a problem?

lack of DMC, rejected on DMC scanner station

When did it happen?

1/30/2024 12:00:00 AM (your local time)

How many parts ?

1.00

2. What is the cause?

Method : Jail management : Part with missing DMC mixed with good parts due to that part was escaped from the jail (NOK Vision test) and mixed with good parts because :
1-the transfet chute of nok part from the unloading clamp to the jail is not fixed and allow to drop NOK parts oustside the jail
2- the is lack training of opeartor due the management of parts on floor

3. Description of the applied modification

BEFORE

the transfet chute of nok part from the unloading clamp to the jail is not fixed and allow to drop NOK parts oustside the jail

AFTER

the transfet chute of nok part from the unloading clamp to the jail is totally covered and fixed

4. What we learned?

ERADICATION

What is the countermeasure that was put in place to avoid recurrence ?

For occurence
*/update the design of the tansfer chute in the eletrical test to be tottaly cover and don't allow drop the NOK parts
*/training session for all opeartor with mention forbidding to pick up all dropped parts on the flow and each dropped parts will be traited by quality agent
For the non-detection
*/R&R for the vision tester for the failure of lack DMC

CHECKING

What is the method (who, what, how) for the countermeasures?

Who : AVI
What :
*For occurence : check regular the transfer chute in electrical test
chech there is no dropped parts on floor
*/For non-detection
check the vision tester and pass some NOK parts and verifiy the good detection on vision camera

SIGNALING

What is the countermeasure supposed to do or make or h detecting a non conformity ?

In case of detection of NOK parts with lack of DMC in the production line : alert and block all stock for sorting
+ Alert and block the parts in transit

5. What has been modified?

a. Proces is modified according to Before/ After sheet:	☐	g. Visual aids are posted:	☑
b. All documents have been updated and has been validated with the operators:	☐	h. Operators and other functions are trained:	☑
c. Procedures and work instructions:	☐	i. Proof of training is avalaible (records,5 ' meeting):	☑
d. Control Plan and PFMEA:	☐	j. Operators can correctly describe what they must do:	☑
e. Maintenance instructions:	☐	k. Other:	☐
f. Records (start-up checklists, reaction sheets, preventive maintenance...):	☑
