D 4. Root cause of occurrence

Work out the root causes using first Ishikawa, then FTA and finally 5 why's (Tools to use chosen by Nidec).

ROOT CAUSE OF OCCURRENCE

standard is not enough :
the frequency of cleaning the debreding station is not well defined , that's mean cleaning each shift is not enought to eliminate the burr and the risk of punshed point not done

HOW WAS THE DEFECT REPRODUCED ?

During the debriding operation, the fixture is not clean (there are some metallic burrs ticked inside the fixture).
The operator put OVP and started the cycle of debriding. -> after the accumulation of burrs, the defect was created.

Attachment:

D 5. Root casue of non detection

ROOT CAUSE OF NON DETECTION :

Standard is not efficient.
In the method of control in the debriding station, the operator takes part each production of parts and controls it visually regarding the punched point.
