D 4. Root cause of occurrence

Work out the root causes using first Ishikawa, then FTA and finally 5 why's (Tools to use chosen by Nidec).

ROOT CAUSE OF OCCURRENCE

At the end of soldering, the operator passes the soldering iron (with the tin remaining on the nozzle of the soldering iron) to be cleanned and the smal burr stick and drop in the sector of PCBA

HOW WAS THE DEFECT REPRODUCED ?

Making a Gemba check on the station and check the operation of soldering according to the work instruction : Each operator soldering his specific point --> When the operator slides the soldering iron through the soldered points (containing tin), the tin drop away.

Attachment:

D 5. Root casue of non detection

ROOT CAUSE OF NON DETECTION :

The operator didn't have the clear information to control the point.control point is unclear because The control instruction doesn't specify the control point of not having tin in sector of PCBA

Attachments:

LLC Type

Date of LLC: **6/26/2024**

Logistics: ☐ Management: ☐

Product: ☐ Detection: ☑

Occurence: ☑ Process: ☐

1. What was the problem?

What happened?

pin of tin on the soldering pad, risk of contamination

Who detected it?

operator

Where was it detected?

CM4 line

How was it detected?

visually

Why is it a problem?

pin of tin on the soldering pad, risk of contamination

When did it happen?

1/30/2024 12:00:00 AM (your local time)

How many parts ?

1.00

2. What is the cause?

At the end of soldering, the operator passes the soldering iron (with the tin remaining on the nozzle of the soldering iron) to be cleanned and the smal burr stick and drop in the sector of PCBA

3. Description of the applied modification

BEFORE	AFTER

Manuel soldering
defect not recognize by control operator

IC700_Cm4__Old_one_ (1).pdf

automatic soldering with robots
updated the control instruction

IC700_Control_soldering_station_updated (1).pdf

4. What we learned?

ERADICATION

What is the countermeasure that was put in place to avoid recurrence ?

For occurence
*/switch to automatique soldering with robot
For non-detection
*/Updated the Control instuction of station control & inspection soldering points
*/training opeartor of control& inspection of soldering point regarding the new issue

CHECKING

What is the method (who, what, how) for the countermeasures?

Who : AVO
What :
*For occurence :
--Follow up the automatic soldering operation
*/For nin detection
-- checking the apply of standard of control

SIGNALING

What is the countermeasure su

In case of detection of NOK part
soldering pad, risk of contamina
line : alert and block all stock fo
+ Alert and block the parts in tra

5. What has been modified?

a. Proces is modified according to Before/ After sheet:	☐	g. Visual aids are posted:	☑
b. All documents have been updated and has been validated with the operators:	☑	h. Operators and other functions are trained:	☑
c. Procedures and work instructions:	☑	i. Proof of training is avalaible (records,5 ' meeting):	☑
d. Control Plan and PFMEA:	☐	j. Operators can correctly describe what they must do:	☐
e. Maintenance instructions:	☑	k. Other:	☐
f. Records (start-up checklists, reaction sheets, preventive maintenance...):	☐		

An evidance of modification:

8D Report Explanation

D1
Nidec opens and incident and issues an 8D to the Supplier
D2-D3
The Supplier undertakes to: • **Contain all defective Supplies which have the same defect from all stocks (finished and semi-finished) and in transportation and at all affected Nidec locations worldwide,** • **Upon request, send a team to carry out sorting and inspection operations at Nidec and Nidec's Customers locations,** • **Upon request, send a team at Nidec's site to address the issue, even if the responsibility of the Supplier has not been proven yet,** • **Replace defective batch (es),** • **Label non-defective batch(es) accordingly,**
D4-D5-D6
The Supplier undertakes to: • **Perform an exhaustive analysis to identify the root cause of the non-conformity with the defined methods,** • **Provide Nidec with an action plan to be validated by Nidec prior to any action being implemented.** • **Update the production CP accordingly to be validated by Nidec.**
D7-D8

The Supplier undertakes to:

- **Check the efficiency of the actions implemented. Results have to be validated by Nidec.**
- **Update all related documents.**
- **Implement the actions to similar Supplies and processes (elimination of recurrences).**
- **Issue a Lesson Learned Card.**

Supplier 8D Report Evaluation Sheet

8D Evaluation Sheet has to be presented with final version of 8D report. Evaluation sheet is a tool for assessing compliance of 8D content with Nidec requirements. There are with three levels of acceptance:

- **0% - 79% - 8D does not meet minimum requirements and cannot be accepted**
- **80% - 89% - 8D meets minimum requirements and can be accepted**
- **90% - 100% - 8D evaluated with bonus points and can be accepted**

8D Evaluation Sheet has three levels of points:

- **Unsatisfactory/Not OK**
- **Acceptable**
- **Requirements fulfilled/Bonus**

Incidents closure

8D following C1 and C2 incidents will be closed after Nidec validation.

Nidec may perform an 8D audit to assess 8D application for C1 incidents. The standard template (Supplier 8D audit) to be used is provided with the RFQ package.
